

WHAT IS EGOLD

eGold is a new digital currency based on the Ethereum blockchain. eGold aims to unify eSports betting enthusiasts all around the world by offering an easy,

quick, and secure alternative for betting on their favorite games – Counter Strike: Global Offensive, League of Legends, DOTA2, Hearthstone, World of Warcraft, and many others.

eGold team is composed of professionals

with vast experience in iGaming, product development, operations, eSports, marketing and Blockchain technology.

The existing market problems are **transparency** and **security**. **How can eGold resolve them?**

Every transaction with eGold will be recorded on the blockchain, so **ANYTIME ANYWHERE ANY CUSTOMER** can check them, which actively solves the transparency problem.

Token abbreviation: EGL

The blockchain functionality ensures that each bet once placed is locked until the match is over and your profits will be automatically paid out thanks to the smart contracts.
